

WEB SITE WIDGET

Set-Up Instructions & Contact Information

The *Check Before You Burn* widget will be a key notification tool when a *Winter Spare the Air Alert* has been issued. The widget can be embedded within any web page with the placement of a small snippet of code and provides real-time burn status information. The code will bring the Air District's live burn status content to any website automatically as the Air District updates it. The widget code is available via a link on the widget from the www.sparetheair.org and www.baaqmd.gov websites.

Programming Code for Web Site Managers:

Code for the widget can be found at:

<http://www.baaqmd.gov/Home/Divisions/Information-Services/Air-Quality-Widgets/STA-Alert-Widget.aspx>

For technical questions about adding the widget to your site, contact:

Anja Page
Webmaster
Bay Area Air Quality Management District
